1. Project Overview

The "Cybersecurity Awareness for Employees" platform is a comprehensive digital learning system designed to raise cybersecurity awareness among non-technical employees. Built on modern e-learning standards, the platform delivers simplified, progressive content that guides learners from foundational concepts to practical application.

This project was developed as part of an applied cybersecurity module in Information Engineering, with the goal of providing a practical and professional solution for strengthening the security culture within organizations — specifically Syrian smart school

1.1 Core Objectives

- Empower employees to identify and respond to common cybersecurity threats
- Build a sustainable security culture within the organization
- Deliver accessible, simplified content available anytime, from any device
- Document cybersecurity awareness deliverables aligned with ISO 27001 standards

2. Course Content

The course is structured into five interconnected modules, each covering a critical area of employee-level cybersecurity awareness:

#	Module	Content & Lessons
	Module 1	Getting Started with Cybersecurity: welcome overview, phishing & ransomware intro, insider threats — 3 videos
	Module 2	Password Management: why passwords matter, how attackers steal them, creating strong passwords — 3 videos
	Module 3	Phishing: email phishing, full phishing email analysis, phishing techniques, prevention & response — 4 videos
	Module 4	Malware & Ransomware: types of malware, prevention habits, malware vs ransomware, ransomware actors — 4 videos
	Module 5	Cybersecurity Scenario: from one click to a full attack — real-world simulation and correct response — 1 video

3. Platform Features

3.1 Full Bilingual Support (AR / EN)

The platform fully supports both Arabic and English. Users can switch languages at any time without page reload, with automatic direction change (RTL/LTR) and font switching. Arabic content uses the Cairo typeface while English uses Sora — both optimized for screen readability.

3.2 Live Synchronized Captions

Every lesson includes a full, time-synced transcript displayed beneath the video in real time. Users can choose caption language (Arabic / English / Off) and click any transcript line to jump directly to that point in the video — making the platform accessible for learners at all language levels.

3.3 Progress Tracking

The platform automatically tracks lesson completion and displays a live progress bar on the main page. Completed lessons are marked with a green checkmark, encouraging learners to continue through the full course.

3.4 Final Assessment Quiz

A 10-question final quiz covers all five modules with immediate feedback after each answer — including a detailed explanation and retry option on incorrect responses. A personalized performance summary with improvement recommendations is shown at the end.

3.5 Fully Responsive Design

The platform is optimized for all devices: desktop, laptop, and mobile. The layout adapts automatically to screen size without any loss of features or content.

3.6 Professional UI/UX Design

The platform uses a modern dark-themed design (Navy & Teal color system) with gradient backgrounds, frosted glass cards, and polished animations — delivering an experience comparable to commercial platforms like LinkedIn Learning and Coursera.

4. Technical Specifications

Technology Stack	HTML5 / CSS3 / Vanilla JavaScript — no external framework
Hosting	GitHub Pages — free, always-on, zero configuration
Video Player	YouTube Embed via YouTube IFrame API for full programmatic control
Typography	Cairo (Arabic) + Sora (English) — Google Fonts

Caption System	Custom-built JS engine with per-second timestamp syncing
Video Length	1–3 minutes per lesson — optimized for Microlearning
Quiz Engine	Vanilla JS with immediate feedback, retry logic, and scoring
Accessibility	RTL/LTR switching, bilingual captions, responsive layout

5. Alignment with ISO 27001

This platform serves as the official deliverable for Component 5 of the organizational security project for Syrian smart school , aligned with ISO 27001 — specifically covering employee information security awareness and training:

- ISO 27001 — Control A.7.2.2: Information Security Awareness, Education and Training — fully addressed by this platform
- Course content targets the most common threats faced by non-technical employees
- Microlearning format (1–3 min videos) aligns with industry best practices for corporate training retention
- Arabic language support ensures content reaches all employees regardless of English proficiency
- The final quiz provides a measurable mechanism to verify employee knowledge absorption
- Platform is deployable immediately with no infrastructure cost, making it viable for SMEs and schools alike

6. Conclusion

This platform demonstrates a professional model for integrating cybersecurity with e-learning in a practical, institution-ready format. The project exceeded course requirements by delivering a fully functional platform deployable in real organizational environments to meaningfully improve security culture.
